Zennio Hotel Solution

Everything under control

Guest Room Control

- Lighting (on/off, dimmer, RGBW, colour temperature)
- Presence detection
- HVAC
- Audio
- Shutter & curtains
- Humidity control
- Access control
- Guest Room Management System (GRMS)

Presence monitoring

The key for energy management

Occupied room 

- Welcome scene
- Comfort temperature

Empty room 

- Standby temperature
- Lights & sockets off

Smart Hotels, Happy Guests

Eco-Friendly minds

Energy-conscious guests

It is important to raise awareness among guests about their energy consumption in the hotel. To achieve this, we use several techniques

- Real-time visualization of consumption and carbon footprint
- Incentive system for eco-friendly stays
- Controls that set an eco-friendly temperature in the room

Eco Indicator

Energy-conscious guests

- How to raise awareness among guests that their stay at our hotel has an energy impact on the environment

Energy Monitoring

The most powerful panels, the most powerful control

- Powerful energy monitoring visualization from anywhere

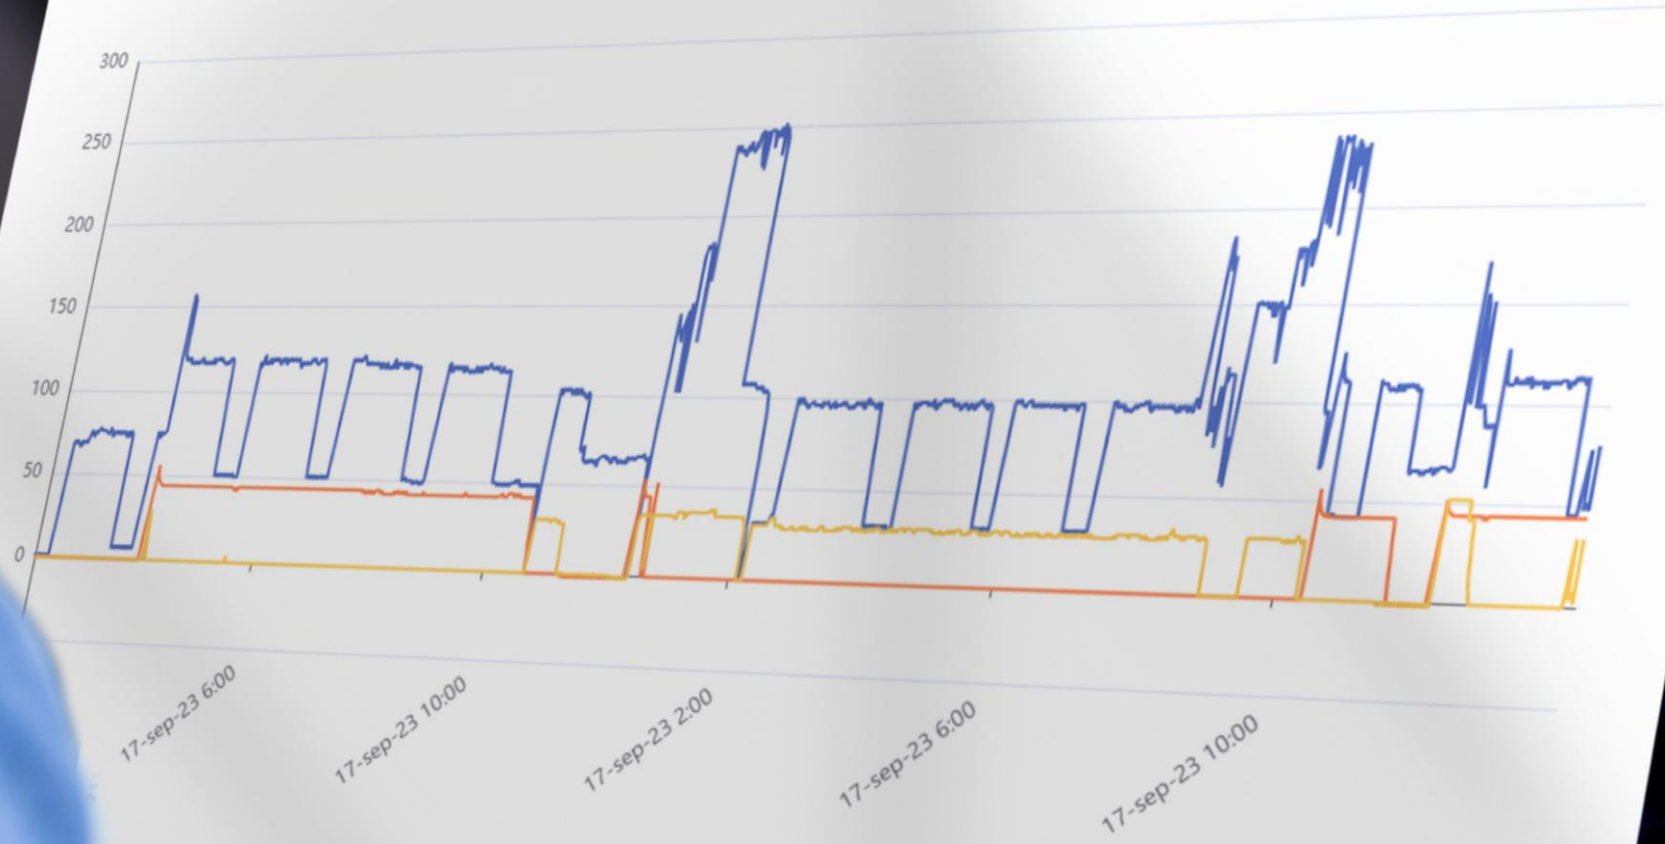

Building Management System

Monitoring & Decision Making

- Comparative consumption in rooms with similar characteristics that help decision-making: Do I need to change the lighting system, the climate control, or improve insulation?
- Guest consumption monitoring
- Alarm and overconsumption alert system

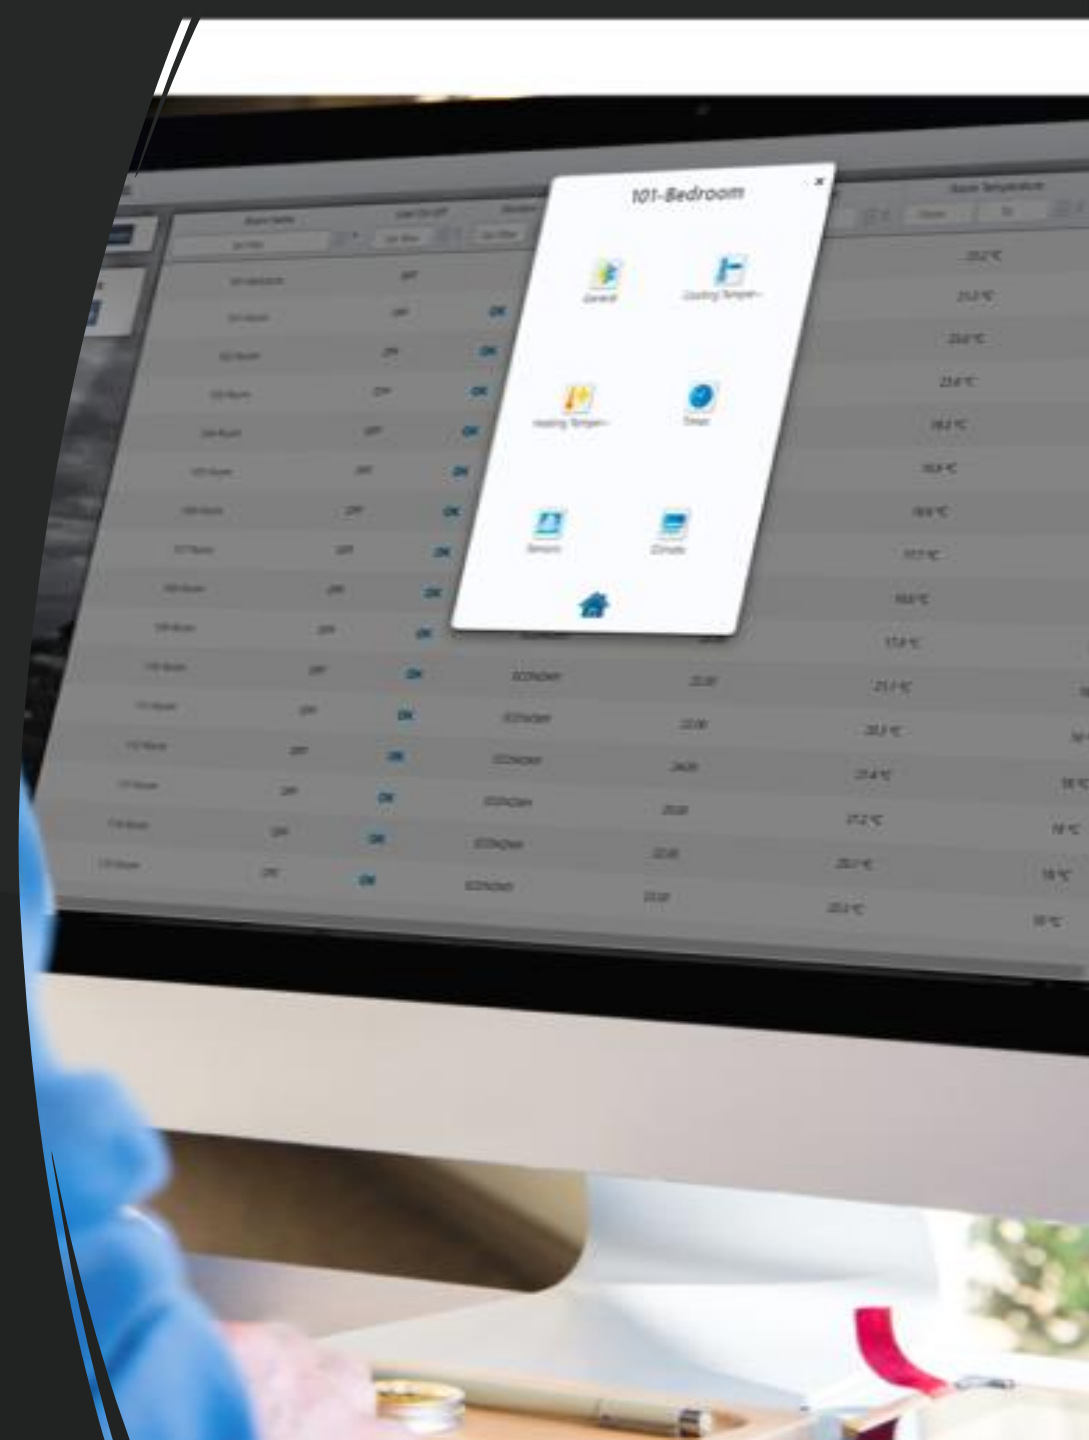

R.General [W] Total: 154,922 Daily data: (Avg: 18 Min: -2 Max: 56)
R.Clima [W] Total: 114,638 Daily data: (Avg: 13 Min: -2 Max: 52)

Building Management System

Monitoring & Decision Making

- Visualization of the real state of the rooms
- Remote adjustment of room parameters
- Logs of data and historical reports
- Automatic alerts in case of room incidents
- Common areas control & monitoring
- Timers

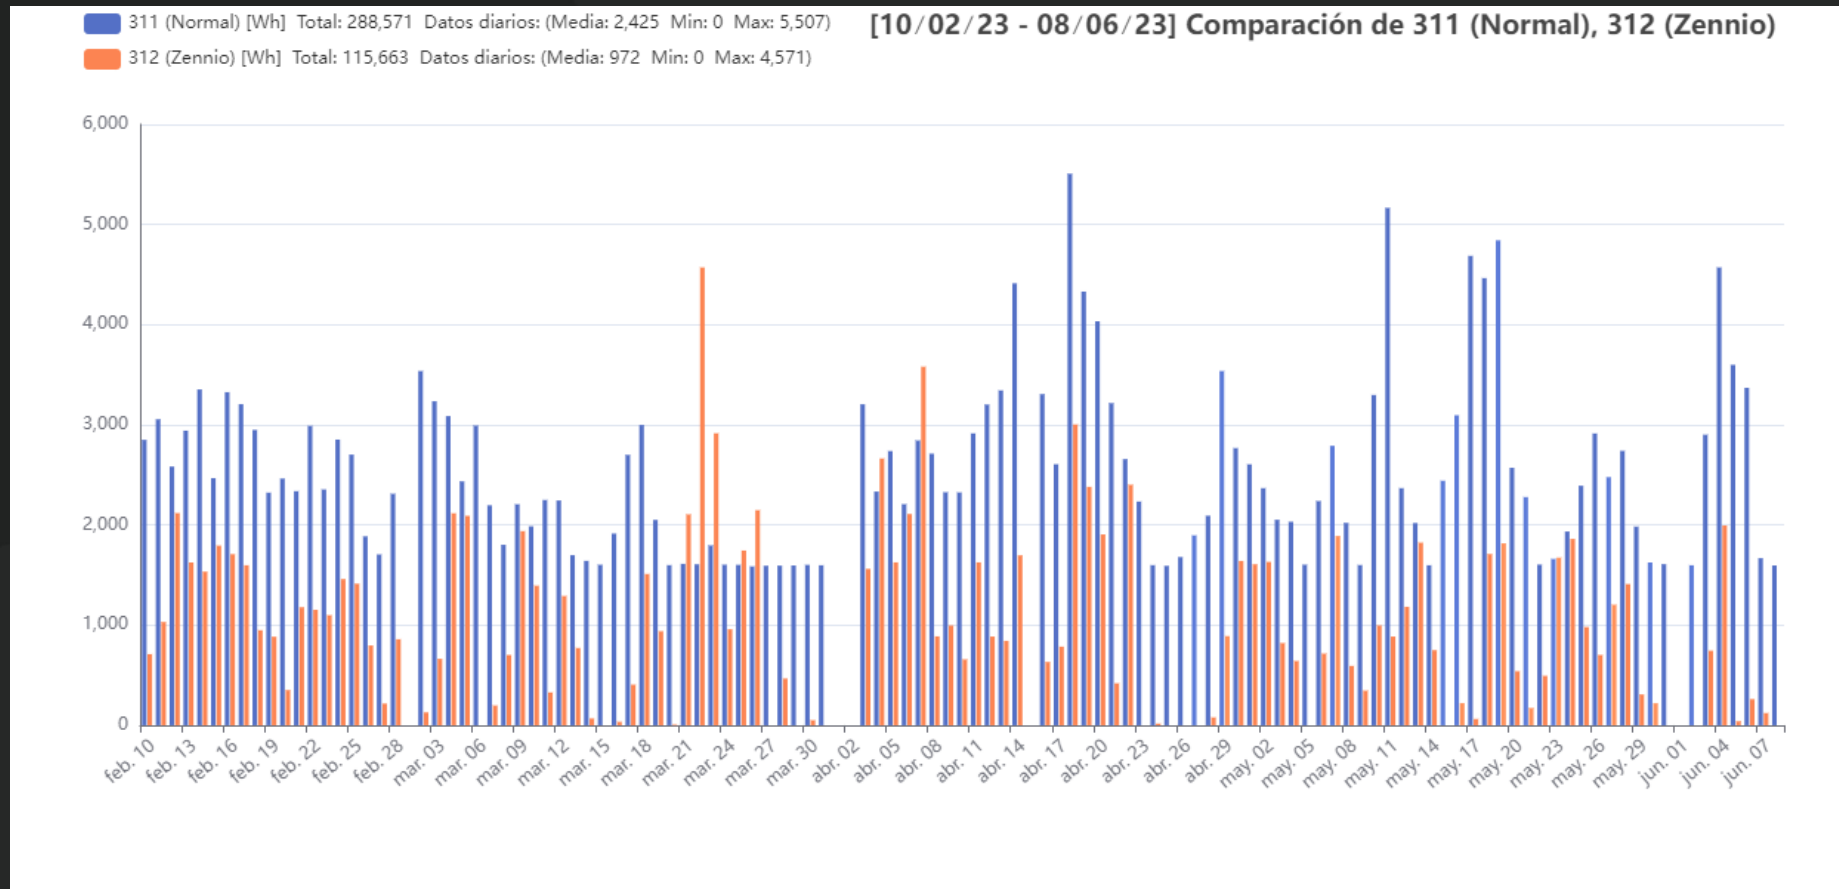

Zennio's Contribution to Sustainability

- Energy Costs per room per night
 - IDAE . 2001: 6,150 KWh per room per year
 - Hospitality Technology Institute. 2013: 4€ per room per night
 - Everi USA: 4,000 USD per room per year in energy consumption
 - openAI, data from 2022:
 - Europe. Consumption per night per room up to 40 kWh. Around 2,700 €
 - US. Consumption per night per room up to 50 kWh. Around 3,500 €

Zennio's Contribution to Sustainability

- Energy consumption in the room. Breakdown
 - HVAC: 50% – 70 %
 - Lighting: 10% – 20%
 - Others (appliances, electronics and water heating) – 10% – 30%

Zennio's Contribution to Sustainability

Zennio's Contribution to Sustainability

- Our own data
 - Live, real-time data for 8 months
 - Identical rooms, over 80% of occupation both
 - Room with Zennio system saves 60 % of the energy consumed in a room

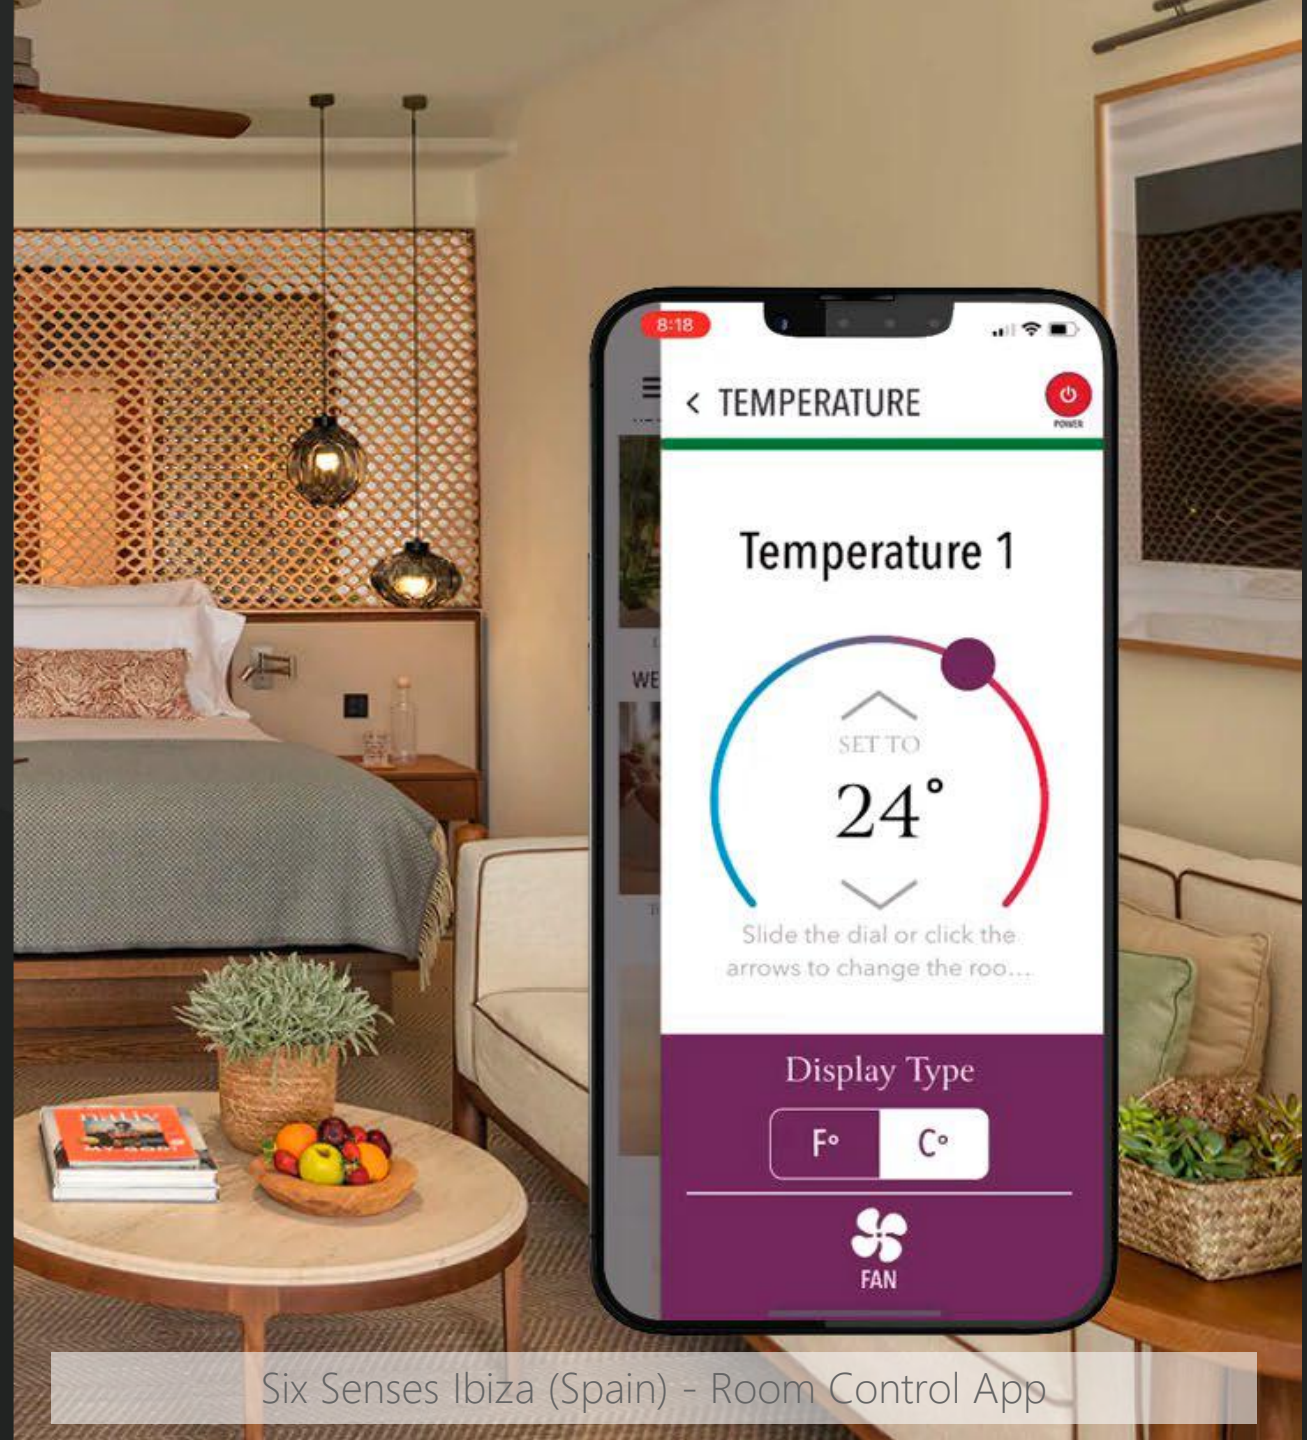

Zennio's Contribution to Sustainability

- Range of savings
 - Between 1,500 € and 2,000 € per room per year.
- Carbon foot print reduction equivalent to 100,000 people.

Guest Experience
